

ANALYSIS OF THE FAMILY OROBANCHACEAE FROM CARL STUDNICZKA'S HERBARIUM

VLADOVIĆ Dalibor, MITIĆ Božena

Abstract. We analysed family Orobanchaceae (orders: Orobanchaceen and Rhinanthaceen) with a total of 127 herbarium sheets. According to the labels, the majority of herborized material was collected in the area of Austria (30 sheets). Most herbarium sheets belong to: Flora Böhmens (12) - including Flora von Böhmen collection and Flora von N. Oesterreich (12) - including Flora von Oesterreich collection. With reference to the part of Studniczka's herbarium which has already been analysed, there are three collections which are mentioned for the first time. The following botanists or collectors of herbal material are mentioned for the first time - Bergh A., Führer and Türckheim. Most herbarium sheets were collected by Studniczka himself (53).

Keywords: Studniczka's herbarium, Split, Croația.

Rezumat. Analiza familiei Orobanchaceae din ierbarul Carl Studniczka. Am analizat familia Orobanchaceae (ordinele: Orobanchaceen și Rhinanthaceen) cu un număr total de 127 de file de ierbar. Conform etichetelor, mare parte din materialul analizat a fost colectat din Austria (30 file). Cea mai mare parte a filelor de ierbar aparțin de: Flora Böhmens (12) – incluzând colecția Flora von Böhmen și Flora von N. Oesterreich (12) – incluzând colecția Flora von Oesterreich. Cu referire la partea din ierbarul Studniczka care deja a fost analizată, sunt trei colecții menționate pentru prima dată. Următorii botaniști și colecționari de material ierbos sunt menționați pentru prima dată: Bergh A., Führer și Türckheim. Cele mai multe file din ierbar au fost colectate de însuși Studniczka (53).

Cuvinte cheie: ierbarul Studniczk, Split, Croația.

INTRODUCTION

We worked on Carl Studniczka's herbarium which can be found in the Natural History Museum in Split. As an amateur botanist, Carl Studniczka collected plants while traveling (1869-1904) and working as an officer (data are known from herbarium labels) in the wide surrounding area of: Vienna and Wiener Neustadt in Austria, Split in Croatia, Celje in Slovenia, Kotor in Montenegro, Olomouc and Leitmeritz in the Czech Republic, Przemysl in Poland and at last Trieste in Italy. The analysis has shown that this herbarium contains samples of the plants which were collected and sent to Studniczka by many botanists or collectors of that time.

MATERIAL AND METHODS

In this paper we analysed the herbarium sheets for the family Orobanchaceae. From the labels of the herbarium sheets, we firstly copied the Latin name of the genus and the species; then the date, month and year of collection, followed by the collector (**A**-Alioth, **Ay**-Ayasse, **B**-Barth, **Ba**-Baumbach, **Be**-Bergh, **Bm**-Brandmayer, **Bn**-Brendel, **Bo**-Borbás, **Br**-Bordère, **C**-Cornaz, **F**-Favrat, **Fr**-Freyn, **Ft**-Fritze, **Fü**-Führer, **G**-Gander, **Ga**-Gandoger, **Gr**-Graf, **H**-Halácsy, **Ha**-Hansen, **He**-Henser, **Hu**-Huet, **H/P**-Huter et Porta, **J**-Jacob, **Ja**-Janka, **K**-Kugler, **Kü**-Kühnau, **Ku**-Kumlien, **M**-Masson, **R**-Ressmann, **Re**-Reverchon, **S**-Studniczka, **Si**-Sire, **T**-Trautman, **Tü**-Türckheim, **Z**-Zetterstedt, **Z/W**-Zetterstedt et Wickbom) and the affiliation to the particular herbarium collection (FA-Flora Austriae inf., FAL-Flora Algovica, FB-Flora Böhmens, FdB-Flora de Bormio, FvB-Flora von Böhmen, FC-Flora Carinthiaca, FvC-Flora von Cilli, FD-Flora Dalmatiens, FG-Flora Gallica exsiccata, FI-Flora von Istrien, FN-Flora von Nieder-Oesterreich, FO-Flora von Oesterreich, FP-Flora von oesterr. Polen, FR-Flora der Raxalpe, FS-FI. Schleswig, FvS-Flora von Steiermark, FT-Flora Transsilvaniae, Ft-Flora transsilvanica, FvT-Flora von Triest, FW-Flora von Wien, FWN-Flora von Wr Neustadt, HA-Herbier E. Ayasse, HK-Herbarium R. Kühnau, HR-Herbier Rosine Masson, J-Janka iter turcicum a. 1871., P-Plante Visconsin Exs., R-Reise durch das südliche Spanien 1873., S-Société Helvétique). According to Flora Croatica Database (FCD), The Plant list and USDA plants Database, we listed the name of the species in brackets; from the label we copied the numeric sign, name of the place where the plant had been found with altitude data if available and listed the number of herbarium samples in brackets.

RESULTS AND DISCUSSION

List of species: (Ord. 84: *Orobanchaceen* and Ord. 85: *Rhinanthaceen*).

1. *Alectorolophus angustifolius* Gmel. 15.8.1872. **Fü** (*Rhinanthus serotinus* /Schönh./ Oborny) Zobtengebirge (4)
2. *Bartschia alpina* L. July 27, 1869. **T** (*Bartsia alpina* L.) Reisingebirge – koggenleis (4)
3. *B. alpina* L. July, 1873. **K** FAL (*B. alpina* L.) Pfronten (Bavaria). In pratis et glareosis humidis solo dolomitico Aggenstein, 1790 met. (5)
4. *Bartsia spicata* Ram. August 3, 1873. **Br** (*Nothobartsia spicata* /Ramond/ Bolliger & Molau) Gèdre; Htes Pyrénées (3)

5. *B. spicata* Ram. August 3, 1873. **Br** S (*N. spicata* /Ramond/ Bolliger & Molau) Localité Gèdre; Htes Pyrénées Station Paturages de Mosca, terrain schisteux Altitude 1200 mètres (4)
6. *Epiphegus virginiana* Bart. **He** (*Epifragus virginiana*/L./ W.P.C. Barton) New Jersey (2)
7. *Eufragia viscosa* Benth. July 19, 1873. **Ft** R (*Parentucellia viscosa*/L./ Caruel) Pto Maria, in graminosis (3)
8. *Euphrasia coerulea* Tausch. = *E. ericetorum* Jord. = *E. aristata* Favrat August, 1878. **F** S (*E. stricta* D. Wolff) Lausanne, bords du Léman. Pelouses, sables & graviers 375 m (8)

The total number of the herbarium sheets for the analysed family is 127 (with 434 samples of herbal plants). The majority of the plants was collected in Europe (121 herbarium sheets) and 6 herbarium sheets are from North America.

Most of the herbarium samples were collected in the area of Austria (30 herbarium sheets) and: Czech Republic (19), Italy (14), France (11), Switzerland (8), Croatia (7), Poland (7), USA (6), Montenegro (5), Romania (5), Germany (4), Slovenia (4), Norway (3). One herbarium sheet was collected in: Bulgaria, Hungary, Spain and Sweden.

According to the affiliation to a particular herbarium collection in the analysed families or their parts the most represented is Flora Böhmens (12) - including Flora von Böhmen collection and Flora von N. Oesterreich (12) - including Flora von Oesterreich collection. This is followed by other collections, such as: Flora von Wr. Neustadt (10), Société Helvétique (9), Flora Dalmatiens (8), Flora von Triest (7), Flora von oesterr. Polen (6), Flora Gallica exsiccata (4), Flora Transsilvaniae (4) - including Flora transsilvanica collection and others. In the part of the herbarium which has already been analysed (compare with: MITIĆ et al., 2008, 2010-2011, 2011, 2012, 2013; VLADOVIĆ et al., 2007, 2009, 2010, 2012, 2013a, 2013b, 2014a, 2014b, 2015, 2017; ŽEVRNJA et al., 2008, 2009, 2010a, 2010b, 2011, 2013a, 2013b, 2013c, 2014a, 2014b, 2014c, 2015), three new collections are mentioned and there are: Flora Algovica (1 herbarium sheet), Janka iter turcicum a. 1871. (1 herbarium sheet) and Reise durch das südliche Spanien 1873. (1 herbarium sheet). There are 36 herbarium sheets that are unmarked and therefore we do not know which herbarium collection they belong to.

Most of the samples of the herbarium plants were collected by Studniczka himself (53 herbarium sheets), while others were sent to him by: Freyn (13), Brandmayer (5), Favrat (5), Gandoger (5), Halácsy (4), Kumlien (3), Borbás (3)

and others. In the part of the herbarium which has already been analysed, the following botanists or collectors of the herbal material are mentioned for the first time - Bergh A., Führer and Türckheim.

The oldest herbarium sheet dates from 1865, whereas the newest ones date from 1904. The vast majority of the herbarium sheets (68) was collected during the period 1870 - 1880. The exact year of collection miss from 12 herbarium labels.

According to Studniczka, within 127 herbarium sheets, there are 13 genera with 81 species and 9 varieties.

CONCLUSIONS

In this paper, there are mentioned herbarium sheets from Romania that could be important as a contribution to the flora of Romania and they are: *Euphrasia salisburgensis* Funk July 18, 1876. **B** Ft (*E. salisburgensis* Funck ex Hoppe) In rupestribus subalpinis: Kronstadt (6), *Melampyrum saxosum* Baumg. August 21, 1874. **Bo** FT (*M. carpathicum* Schult.) in graminosis vallis Valeriaska subalpe Retezát 4100' alt. (3), *Pedicularis campestris* Griseb. May 22, 1873. **Fr** (*P. comosa* L. ssp. *campestris* /Griseb. & Schenk/ Soó) Siebenbürgen. Comitat Kolos. Bergwiesen bei Klausenburg. Tert. Tegel 480 m (2), *Pedicularis hacquetii* Graf. August 13, 1874. **Bo** FT (*P. hacquetii* Graf) in graminosis rupium ad lacum "Zanóga" alpium Retezát 6500' (1) and *Rhinanthus alpinus* Baumg. August 20, 1874. **Bo** FT (*Rh. riphaeus* Krock.) in graminosis vallis Valeriaska subalpe Retezát copiose 4600' (3).
